SOLUTION BUILDERS®

RISE · RESILIENT

Resilient by Design.

R

RESILIENT

Most businesses believe they could recover from an attack or an outage. The data says most of them are wrong. The R in RISE closes that gap.

90%
of leaders confident they can recover within their targets

28%
actually recovered all their data after ransomware

72%
average share of data recovered

THE CONFIDENCE GAP

Believing you can recover is not the same as recovering.

In a 2026 survey of more than 900 senior IT, security, and risk leaders, confidence was high. Results were not.

90%
say they are confident they can recover from a cyber incident within their targets

28%
of those hit by ransomware fully recovered all of their affected data

44%
recovered less than three quarters of their data

38%
suffered extended downtime of critical systems

41%
reported financial loss or revenue impact

42%
reported customer disruption

40% vs 16%
Full recovery rate for organizations that increased their security budgets, versus those that did not. Resilience is something you build on purpose.

FOUR LAYERS

What Resilient is actually made of.

Resilient is the R in RISE: bulletproof against disruption, so your team works confidently from any location, on any device, at any time.

	THE LAYER	HOW WE BUILD IT
01	**Cloud infrastructure** Work from any location, on any device, with systems that do not live in one closet.	**Microsoft 365, Azure, and hybrid cloud designed for your workflow.**
02	**Immutable, tested backups** Three copies, two media types, one off site, and a restore that gets tested, not assumed.	**Backups ransomware cannot encrypt, with recovery drills on a schedule.**
03	**A business continuity plan** Written before the bad day: who does what, in what order, and how long each step takes.	**Recovery objectives agreed with you, then measured.**
04	**Monitoring and failover** Dual circuit designs, 24/7 monitoring, and alerts that reach a human before customers notice.	**99.99% uptime with dual circuit failover design.**

22
MINUTES

REAL OUTCOME · PROFESSIONAL SERVICES FIRM

Ransomware contained in 22 minutes. Every system restored from immutable backups. Zero ransom paid. Because the layers were already in place.

THE TEN MINUTE CHECK

Six questions to ask your team this week.

You do not need a consultant to start. You need honest answers.

1. When did we last restore a full system from backup, for real, and how long did it take?
2. If the office lost power or internet for two days, could everyone keep working?
3. Could ransomware reach our backups from a compromised laptop?
4. Who makes the call during an outage, and does everyone know how to reach them?
5. How long can each system be down before it costs us real money?
6. Is our continuity plan written down, or is it in one person's head?

If any answer was **"I am not sure,"** that is where Resilient starts. We will run the full assessment with you, no pressure, just a plan.
